

Statewide Lists Subcommittee Proposed Feedback

1. Residential Recycling Collection List should be aligned with Public Place Collection List.
2. It is appropriate to include a broader range of materials than is commonly recycled under the current system so that feasibility and costs can be further evaluated as part of the Needs Assessment.
3. The Preliminary Lists should be revisited and refined once further evaluation and recommendations from the Needs Assessment are available, including:
 - Appropriate method(s) of Residential Recycling collection – specifically for glass, but also more broadly.
 - Sortation and marketing of aseptic & gable top cartons – into Mixed Paper vs. positive sort into separate commodity.
 - Sortation and marketing of PET thermoform.
 - Inclusion of fiber food service packaging - the implications of including those materials in Mixed Paper bales on Responsible End Market options.
 - Further evaluation of aerosols on residential collection list in addition to alternative list.
4. Category names, descriptions, and scope of covered materials included should be aligned with industry standards / other EPR states.
5. The Alternative Collection List should be expanded to include additional materials (see next slide).
